

HASSAM IMTIAZ

Principal Software Engineer | Full-Stack

+92 335 3412522 | hassam2522@gmail.com | Lahore, Pakistan | [linkedin.com/in/hassam-imtiaz](https://www.linkedin.com/in/hassam-imtiaz)

SUMMARY

Principal Software Engineer with 6+ years building secure, scalable full stack web applications in React, Node.js, and TypeScript. Delivers REST APIs and the interfaces that consume them across PostgreSQL, MySQL, and MongoDB. Experienced integrating payment gateways and third-party APIs, hardening authentication and access control, and working in compliance-sensitive financial systems where data integrity and auditability are requirements rather than goals. Works across Docker, CI/CD pipelines, and AWS and cloud-native deployment.

CORE SKILLS

Frontend: React, Redux, Context API, React Hooks, Next.js, TypeScript, JavaScript, HTML, CSS, Tailwind, Material UI, React Native

Backend: Node.js, Express.js, TypeScript, RESTful APIs, GraphQL, Microservices, .NET, Serverless Functions

Databases: PostgreSQL, MySQL, MongoDB, Schema Design, Query Optimization, Data Migrations

Cloud & DevOps: AWS (EC2, S3, Lambda), GCP, Azure, Docker, GitHub Actions CI/CD, Automated Deployments, Vercel

Security & Compliance: Authentication and Authorization (SSO, 2FA, Row-Level Security), Secure API Design, Data Integrity Controls, Audit and Compliance Workflows

Integrations: Payment Gateways (Stripe), Webhooks, Third-Party APIs and SDKs

PROFESSIONAL EXPERIENCE

Team Lead

07/2025 - Present

Strategic Systems International

Hybrid

- Lead a team building full stack features in React, Node.js, and TypeScript, owning delivery from requirement analysis through code review and production release.
- Design secure application architecture covering authentication, authorization, and access control across services and clients.
- Architected and implemented microservices that improved application performance by 30%, tuning services for security, scalability, and maintainability.
- Established development, code review, and CI/CD deployment workflows, improving release quality and team throughput.
- Collaborate with product, design, and QA teams to turn business requirements into technical designs, estimates, and prioritized deliverables.

Senior Software Engineer

10/2023 - 06/2025

Strategic Systems International

Hybrid

- Drove end-to-end feature development from requirement analysis through REST API implementation, React interfaces, testing, and release.
- Maintained and optimized existing systems, resolving high-priority production issues and reducing support tickets by 50%.
- Rebuilt accounting and ledger workflows in a compliance-sensitive financial module, enforcing data integrity and auditability across the API and data layers.
- Diagnosed and corrected data integrity defects causing financial mismatches, restoring accurate and reliable customer records.
- Mentored five engineers in TDD and pair programming, cutting code review cycles by 30% and accelerating onboarding.

Software Engineer

06/2020 - 10/2023

Coding Cops

On-site

- Implemented SSO and 2FA authentication, strengthening security standards and reducing unauthorized access attempts by 40%.
- Built and integrated third-party APIs and SDKs within Agile teams, delivering 3+ high-impact features and ensuring reliable interoperability across systems.
- Built and refined React application modules using Hooks and Context API, improving user experience and responsiveness through efficient state management.

- Optimized performance by profiling and refactoring critical MongoDB queries, achieving approximately 80% faster data access under high load.
- Wrote comprehensive Jest unit tests and executed data migrations to support new features without downtime.

PROJECTS

Predaict

05/2026 - Present

Strategic Systems International

An AI-powered sports prediction platform where users forecast the outcomes of tournaments such as the FIFA World Cup, supported by AI-generated match analysis.

Technologies: React, Next.js, TypeScript, Node.js, PostgreSQL, Stripe, Supabase, Edge Functions, AI APIs, Vercel

- Integrated Stripe payment processing for subscription billing, implementing the checkout flow and webhook handlers that keep subscription and payment state consistent with the database.
- Designed the PostgreSQL schema with row-level security for per-user data isolation, enforcing control at the database layer.
- Built the platform end to end in React and Next.js with server-side rendering and API routes, deployed to production on Vercel with automated preview deployments on every pull request.
- Integrated an AI analysis API to generate match insights and prediction reasoning from raw fixture data.

Staff Management Platform

06/2025 - 04/2026

Strategic Systems International

A cloud-based platform to manage and assign shifts to staff members.

Technologies: .NET, RESTful APIs, PostgreSQL, AWS, Angular, React Native

- Designed the hierarchical organization data model and REST APIs, enabling structured, permission-aware management of teams and departments.
- Implemented the staff account provisioning workflow spanning web onboarding and mobile activation.
- Developed a React Native mobile app for staff members, delivering core functionality across iOS and Android.

Self Storage Software Platform

Strategic Systems International

10/2023 - 05/2025

A cloud-based platform for self-storage operators to manage bookings, documents, and accounting workflows.

Technologies: Node.js, Express.js, RESTful APIs, MySQL, Vue.js, AWS

- Built and maintained Node.js and Express REST APIs powering booking, document, and financial workflows.
- Revamped the accounting module to eliminate reconciliation discrepancies, improving financial accuracy and reporting reliability.
- Engineered transaction period controls preventing post-month-end entries, enforcing compliance with accounting periods and audit requirements.
- Integrated PandaDoc e-signature workflows and automated the scheduled generation and distribution of monthly financial reports.

Product Life Cycle Management (PLM) Platform

06/2020 - 10/2023

Coding Cops

A modern product lifecycle management system enabling hardware teams to manage BOMs, track changes, and integrate seamlessly with CAD and ERP tools.

Technologies: React, Node.js, Express.js, RESTful APIs, MongoDB, AWS

- Developed Single Sign-On (SSO) and Two-Factor Authentication (2FA) using Passport, securing access across the platform.
- Integrated third-party APIs and built synchronization mechanisms maintaining data consistency between the platform and external CAD and ERP tools.
- Built React interfaces for BOM management and change tracking using Hooks and Context API.
- Implemented comprehensive Jest test suites sustaining high coverage across critical application paths.

EDUCATION

Bachelor of Science in Software Engineering

COMSATS University Islamabad, Lahore Campus | 09/2016 – 09/2020 | Lahore, Pakistan
